*Clip and shoot, < what else? >*

**SPEEDLITE** Full automatic TTL control  
**Di622** Off camera wireless slave flash mode

The most advanced TTL auto-flash technology fits to Canon's E-TTL, E-TTL II and Nikon's iTTL flash system. Auto power zooming covers digital camera's lens of 16mm to 70mm and responds quickly to the lens action.

# SPEEDLITE Di622

## CLIP AND SHOOT, EASY TO USE

Attach, Switch it on, and Release the Shutter.  
Only two buttons to set all functions.

Simply designed operation system is recommended to the beginners, too. It fully works automatically with your camera.

## FLASH SHOTS EVERYWHERE

Sharpen up or soften up? Flash answers.

Any time and any where, a blink of flash light creates a lively shine and impressive memory. Di622, the easy shot, does not pass up a chance of minutes.

## SPECIFICATION

Usable Camera	Canon EOS Digital SLR cameras

Wireless Slave flash	Synchronize to the pre-flash								
Manual Power ratio	Full - 1/2 - 1/4 - 1/18 - 1/16 - 1/32								
Recycle time	0.3 - 4.7 sec. (Alkaline batteries)								
Number of flashes	200 flashes (Alkaline batteries)								
	AF assist Red beam built-in / Firmware version up capability								
Others	Energy saving mode (Stand-by and Auto power off mode)								
	Fe Lock available								
Dimensions	77 x 130 x 103 mm								
Weight	315g w/o batteries								

Usable Cameras	Nikon	D40, D40x, D50, D70, D70s, D80, and D200
	Canon	300D, 350D, 400D, 10D, 20D, 30D, and 5D

## OFF CAMERA FLASH PHOTOGRAPHY

Easy wireless flash by slave synchronization.

Place one or several Di622 at any place to lighten up or create the art of light onto the subject. Di622 is designed to synchronize with the master flash.

## MOVING FLASH HEAD

Quick and sharp tracing the lens moving position.

High quality stepping motor enable to catch up the frequent and repeated action of lens framing. You won't miss the moment.

Catch Light Panel    Wide Angle Diffuser    Turning Horizontally (180°)    Turning Vertically (90°)

## JOY OF FLASH PHOTOGRAPHY

Most of us are used to think of using flash light only at night or low light conditions. The duration of the flash light, 1/1000 sec. works as a high speed shutter, too. A picture below can only be produced by this exclusive advantage of flash action.

Capturing the motion, lively.

(Photographer : Hiloshi Nakano)

What happens to an action shot when you use a slow shutter speed setting. Di622 acts to briefly freeze the movement of the subject while the slow shutter allows the moving image.

Usual flash picture, all frozen..
